

### CABINET

The cabinet is constructed from moulded high strength structural polymer.

### FAN

The fan wheel is forward curved centrifugal of double width, double inlet design, moulded in one piece from polypropylene and inherently, statically and dynamically balanced.

### FAN SHAFT AND BEARINGS

The fan shaft is hollow of square section. Made from stainless steel and provides efficient torque transfer without the use of screw fastening. Mounted on resiliently mounted sealed bearings.

### FAN HOUSING AND RESERVOIR

Moulded high strength structural polymer, fan housing incorporates integral bearing housing.

### LOUVRE PANELS

Panels are moulded in high strength, structural polymer, incorporating supports to minimise pad sag.

### FAN MOTOR

Motors are tropic proof, two speed, single phase, drip proof, ball bearing resilient mount, with inherent auto re-set overloads. In some regions selected models are available in variable speed.

### WATER DISTRIBUTION

Water supply connection is to a 1/2" BSP float valve. The pump is centrifugal with a plastic casing. Patented distribution trays moulded from polystyrene.

### FILTER PADS

Filter pads are shredded woodwool.
