

TECHNICAL SPECIFICATIONS - ENVIROMAGIC ENV600

CABINET AND WATER RESERVOIR

The cabinet and water reservoir components are moulded from high grade UV polymer. Metal components are manufactured from marine grade aluminium, stainless steel, or are effectively treated to ensure corrosion resistance.

Crane lifting is accommodated via 3 built in shackle points on the top lid surface.

Connection surfaces are provided for outlet ductwork to be fitted using established industry practices.

FAN

The fan is a multi blade assembly constructed of glass reinforced polymer. The blades are aerofoil shaped. The fan is mounted directly to the motor shaft by means of a set screw.

FAN MOTORS

The fan motor is a single phase inverter motor, with die-cast fully enclosed aluminium frame. The motor and fan assembly are supported on an injection moulded glass reinforced polymer venturi ring via a glass reinforced polymer motor mount. The fan motor is fitted with a polarised plug for quick removal and replacement.

ELECTRICAL CONTROL

Control equipment including supply connection terminals, motor control hardware, interface electronics and contactor is factory mounted and wired and contained within an approved enclosure. It is recommended that the electrical contractor install an isolation switch adjacent the cooler.

THERMOSTAT CONTROL

All Enviromagic coolers come standard with a MagIQcool controller, for full automatic control. MagIQtouch or Switch Plate controllers are available as alternative controller options. Connection of the controller to the cooler is via a 40 metre low voltage cable. Enviromagic coolers are also capable of being controlled by an external BMS system.

WATER MANAGEMENT SYSTEM

The water supply connection is via a ½" copper tube that connects to the water inlet solenoid. Pad saturation is achieved through three internal pumps delivering water to a specially designed non-clog water distribution system guaranteeing continuous uniform flow, fitted within the lid of the cooler. The pumps are manufactured from engineering plastics, with stainless steel shafts and fully encapsulated synchronous motors with thermal overload protection. The cooler is fitted ex-factory with an electronic water management system that controls the maximum salinity level of the reservoir water through continuous monitoring and replenishment as determined by the control system. The cooler is fitted with an electrically operated drain valve that responds to the water management control system.

COOLING PADS

Cooling filter pads are Chillcel® fabricated, honeycomb, high efficiency type.

MOUNTING FRAME

An optional mounting frame with adjustable height legs, designed to accommodate roof pitches up to 10 degrees is available.

- Seeley Roofstand (0 - 10 Degrees) P/N 134215
- Seeley Roofstand Braces P/N 860923
